

Train Tracks

Free sample: 6 logic puzzles, easy to expert

Rules, 6 printable puzzles and every answer

by Milo Marwick

New puzzle every day at milomarwick.com

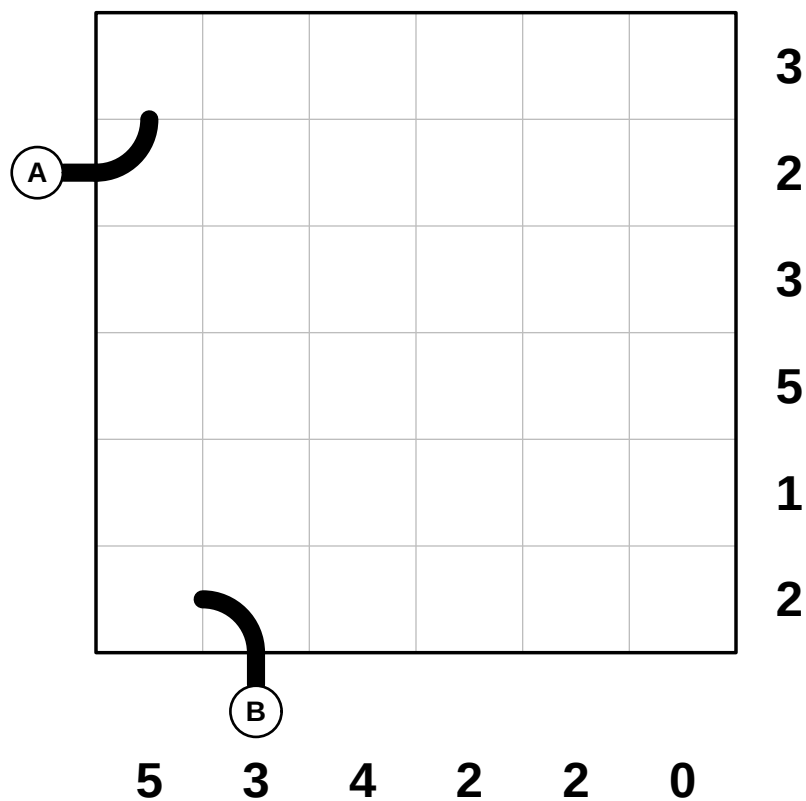

1. Lay one continuous track from A (left edge) to B (bottom edge).
2. The number beside each row and under each column is how many squares in that line contain track.
3. Each square is empty or holds one piece: a straight or a quarter-turn curve. The track never branches, crosses itself or loops.
4. Pieces printed at the start are part of the answer.

Tips

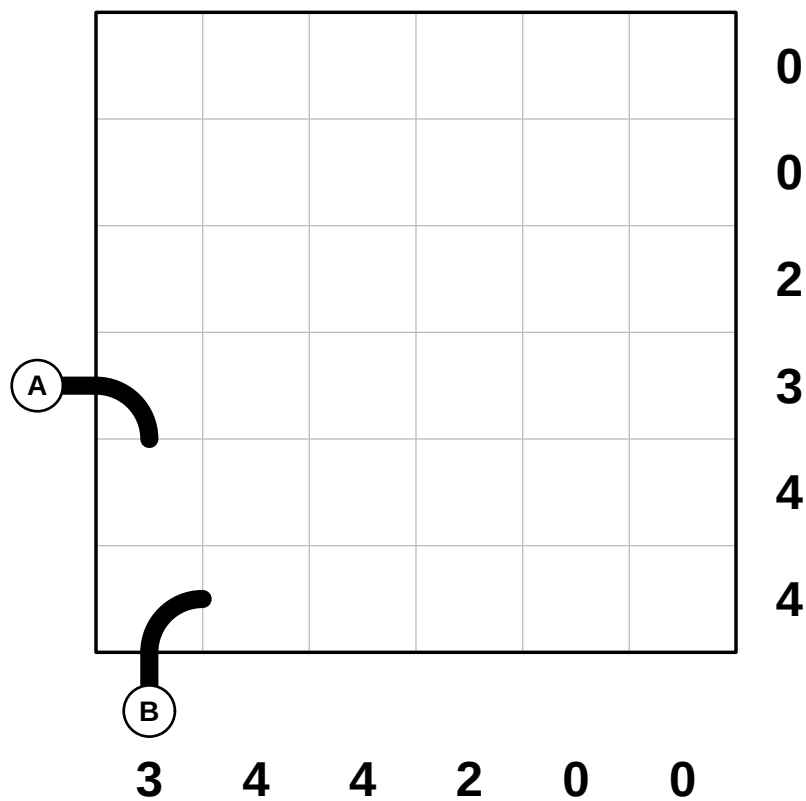

- A 0 means the whole line is empty. Mark those squares with a small x.
- If a line needs as many squares as it has left, all of them are track.
- Every track square connects to exactly two neighbours.
- Never join the two ends of the same piece of track: that makes a loop.
- Only join A's track to B's track as the very last move.
- Easy puzzles need only these ideas. Harder ones reward patience.

Every puzzle has exactly one solution, checked by computer. Answers start on page 7.
